To All Interested Parties:

At the end of last year, Sarasota Surf & Racquet Club embarked on an upgrade project to reduce its high water usage. Our Board determined that aging toilets were a key source of the problem. After extensive research, we concluded that the patented Aqua Miser Leak Prevention System offered the best solution. After training by the Aqua Miser team, our property's maintenance department installed the Aqua Miser fill valves and flappers in all toilets on the premises, including 80 newly purchased units.

The Aqua Miser team demonstrated the performance of the system and trained our entire maintenance staff on the installation and operation of the Aqua Miser system. They have monitored our water bills since installation, and the data proves that the unique features of this system significantly reduce water waste. Our best month since installation shows a reduction of 353,000 gallons of water – a 27.2% reduction from the same month last year.

Aqua Miser continues to monitor our water usage, and their follow-up and support have been excellent. I highly recommend the Aqua Miser and its team of professionals as a proven solution to reduce water waste at any property.

Sincerely,
